## Fish Tales at Different Scales: UAF Graduate Students' Discoveries about Salmon Close to Home and Out at Sea

JUNEAU—The public is invited to join graduate students from the University of Alaska Fairbanks College of Fisheries and Ocean Sciences on Wednesday, April 19, 2017 from noon to 1 pm at the Alaska State Museum as they present findings of their research on the ecology and management of Alaska salmon.

*Fish Tales at Different Scales* will feature presentations and a panel discussion by UAF graduate students Doug Duncan and Lorna Wilson and Assistant Professor Anne Beaudreau. The talks will highlight current research on predators' impacts on juvenile salmon in nearshore areas along the Juneau road system and factors affecting Chinook salmon growth in the ocean. The students will also share techniques of effective science communication that they have been learning about and adopting as a component of their current coursework. Meet the researchers and learn about their adventures at sea and in the laboratory, what they've learned so far, and how the public can stay informed about their future findings. The talks will be held in the Museum's new Earth Sciences / Science on a Sphere gallery. Admission to the event is free and light refreshments will be available.

The Museum is currently on winter hours, open Tuesday through Saturday from 10:00 a.m. to 4:00 p.m. Discounted winter admission is \$5 for adults, \$4 for seniors, and visitors 18 and younger, and Friends of the Alaska State Library, Archives, and Museum, and those with passes are admitted free.
